SUMMARY

Senior Software Engineer with over 20 years of experience designing and building scalable, resilient systems. Proven track record of delivering innovative solutions for large enterprises in finance and gaming. Deeply passionate about functional programming, event-driven architecture, and cloud infrastructure. Actively leverage AI-assisted development tools — including Claude and Cursor — to accelerate coding, improve code review and code quality, and streamline complex refactoring tasks. Recognized for exceptional problem-solving, team collaboration, and mentoring. Proficient in Java and AWS, with a postgraduate degree in Technologies Applied to Information Systems, focusing on Agile methodologies. Eager to combine deep engineering expertise with modern AI capabilities to drive innovation and create meaningful global impact.

WORK EXPERIENCE

Jul/2024 - Ongoing: Senior Software Engineer in Ambush (Remote)

- Maintenance of an ecosystem based on Spring framework including services related to payment.
- Manage OAC using Terraform Datadog provider including dashboards, monitors and alerts.
- Manage CI/CD pipelines using Harness and migration from Jenkins.
- Implemented API error metrics using AOP (AspectJ).
- Implemented functional tests integrated with several downstream services.
- Responsible for release regressions tests.
- AI-first development, usage of Claude and Cursor to fix issues and increase test coverage.
- Live issues investigation, troubleshooting and bug fixes.

Fev/2022 - Oct/2025: Partner/Consultant in Declare Cripto (Remote)

- Lead the architecture and infrastructure of a secure platform used to calculate and manage Crypto currencies generating fiscal documents to be compliant to Receita Federal.
- Manage the AWS account, security, event-driven architecture, serverless APIs, databases and more.
- Implemented API integrations to exchanges such as Binance, Bitso, Mercado Bitcoin, Novadax, etc.
- Implemented integrations with Asaas payment gateway and Sendgrid, Beeviral, Zoho, CRM tools using REST API and webhooks.
- Implemented IAC with Terraform, monitoring with Sentry, CI/CD with Jenkins pipelines.

Jan/2022 - Jul/2024: Lead Software Architect in ADP Brazil Labs (Hybrid)

- Designed a scalable and extensible architecture for a career planner application based on the match of multiple data sources and AI and pluggable to any company and their organograms.
- Responsible for the event-driven architecture, serverless and microservices using Node and Python.
- Responsible for all the cloud infrastructure (AWS), DevOps processes and CI/CD.
- Implemented IAC using Terraform to provide all the AWS resources ready for disaster recovery.
- Implemented integration with Dynatrace, Splunk, Kubernetes, Terraform, Vault, Sonar, Artifactory.
- Adopted NoSQL databases such as DynamoDB, DocumentDB and Opensearch.
- Adopted API Gateway, BFF and feature flags (Growthbook) in the ecosystem.
- Mentoring the team on scalable architecture, clean code, Typescript and Python languages.

Jun/2021 - Nov/2021: Backend Software Engineer Specialist in Agibank (Remote)

- Responsible for the technical definitions for both squads Client Platform and Payment Gateway.
- Architecture evolution in scalability, idempotence, resilience and performance.
- Event-driven architecture using Kafka, RabbitMQ and Spring Cloud.
- Adopted microservices architecture using Java, Spring Boot and Spring WebFlux.
- Implemented batch payment's processing using Spring Batch and Spring Data.
- Implemented integrations with third-party payments gateway like Materal and Dock.
- Implemented integration with Camunda's BPM processes.
- Monitoring and troubleshooting improvements with ELK and Grafana.
- Prioritized technical debts, refactorings and legacy support.

Feb/2020 - Jun/2021: Software Architect in SoftDesign (Porto Alegre/RS - Brazil)

- Responsible for a powerful and scalable streaming hub used to process all the Sicredi's accounting.
- Improved event-driven architecture built with Scala using Kafka and Apache Flink.
- Helped to migrate several legacy data to the digital platform creating ETL processors.
- Microservices architecture with APIs built with Java, Spring WebFlux, Consul, Vault, InfluxDB and MongoDB.
- Integrations with Datalake, Athena and Kafka Connect.
- Integration tests with Groovy and Spock.
- Mentoring the team on event-driven architecture, functional programming and reactive programming.

EDUCATION

2013/2014: Technologies applied to Information Systems with Agile Methodology

Postgraduate Degree in UniRitter

2004/2009: Information Systems

Bachelor's Degree in UniRitter
